

Care of circumcision

The plastic rim usually drops off 5 to 8 days after circumcision. No special dressing is required, and the baby can be bathed and diapered just as if he had not been circumcised. NOTE: A dark brown or black ring encircling the plastic rim is perfectly natural. This will disappear when the rim drops off.

The result is a clean, well-healed line of excision.

Be sure to notify us if healing does not proceed as described. Notify us **immediately** if you should notice any unusual swelling, if the plastic ring has not fallen off within 8 days, or if the ring has slipped onto the shaft of the penis.
